

```
#include <iostream>
```

```
int main() {
```

```
    int tip_percentage{0};
```

```
    double meal_price{0.00};
```

```
    std::cout << "Enter the price of the meal: ";
```

```
    std::cin >> meal_price;
```

```
    std::cout << "Enter the tip amount (5, 10, 15 or 20): ";
```

```
    std::cin >> tip_percentage;
```

```
    std::cout << "You should tip: "
```

```
        << (meal_price * (static_cast<double>(tip_percentage) / 100))
```

```
        << ".\n";
```

```
    return 0;
```

Does it make a whole lot of difference in the highlighted lines if you keep them or not? I understand the purpose of them but if we were to omit them would it completely change the code or edit our result?
